Track Systems for Planters

A SOLUTION
FOR BETTER
SEEDING QUALITY

TRACK SYSTEMS FOR PLANTERS

Every season deserves a good start! Since the window for planting is short, it's important to maximize every opportunity. With the S-TECH 012P track system, you can ensure efficiency while improving seeding quality.

QUICK, SIMPLE INSTALLATION

Installing the track system on your planter takes an average of 4 to 5 hours. No special tools or lifting equipment are required. Plus, the S-TECH 012P installation does not require any modification to your planter.

MAXIMUM AUTONOMY

With a total contact surface of 1,622 in² (1.07 m²), the track system allows you to increase your load capacity. By filling your seed tanks to their maximum capacity, you increase efficiency by reducing unnecessary trips to and from the field.

PROTECT YOUR SOIL

As the weight is distributed over a larger surface area, there is less pressure on the ground. You therefore protect your land from compaction and offer the best growing conditions for your seeds, as rooting will be easier.

MAXIMUM PERFORMANCE

The use of a track system for planters does not create ruts or mounds of soil when turning at the end of the field. Circulation occurs without leaving a trace, which supports more uniform plant emergence and growth.

COMPATIBILITY

The S-TECH 012P is compatible with Case IH 1250, 1255 and 2150 (12 to 24 rows), John Deere 1770NT and 1775NT (12 to 24 rows), White 9816VE and 9824VE and Massey Ferguson VF16 and VF24 planters.

TECHNICAL SPECIFICATIONS

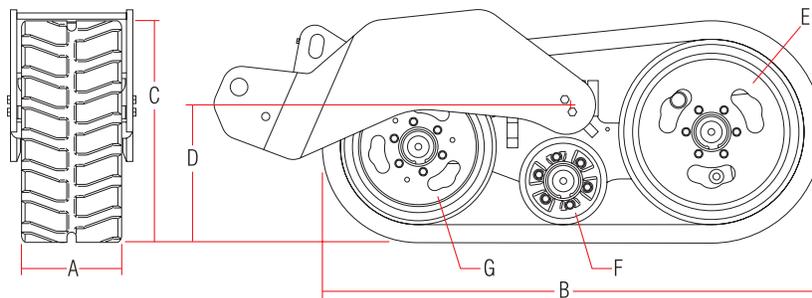

Case IH
